

Business Sales Performance Analytics

Objective

The objective of this project is to analyze business sales data and extract meaningful insights such as total sales, region-wise performance, top-selling products, and category-wise performance.

Dataset Description

The dataset contains sales transaction details including:

Order ID, Order Date, Customer Name, Product Name, Category, Region, and Sales Amount.

Tools Used

Python

Pandas

Matplotlib

Jupyter Notebook / VS Code

Analysis Performed

1. Total Sales

The total revenue generated from the dataset is:

Total Sales = 2,261,536.78

2. Region-wise Sales Analysis

Region	Sales
Central	492,646.91
East	669,518.73
South	389,151.46
West	710,219.68

Observation:

West region recorded the highest sales performance.

3. Category-wise Sales Analysis

Category	Sales
Furniture	728,658.58
Office Supplies	705,422.33
Technology	827,455.87

Observation:

Technology category generated the highest revenue.

4. Top-Selling Product

Top Product:

Canon imageCLASS 2200 Advanced Copier

 Sales: 61,599.82

Key Findings

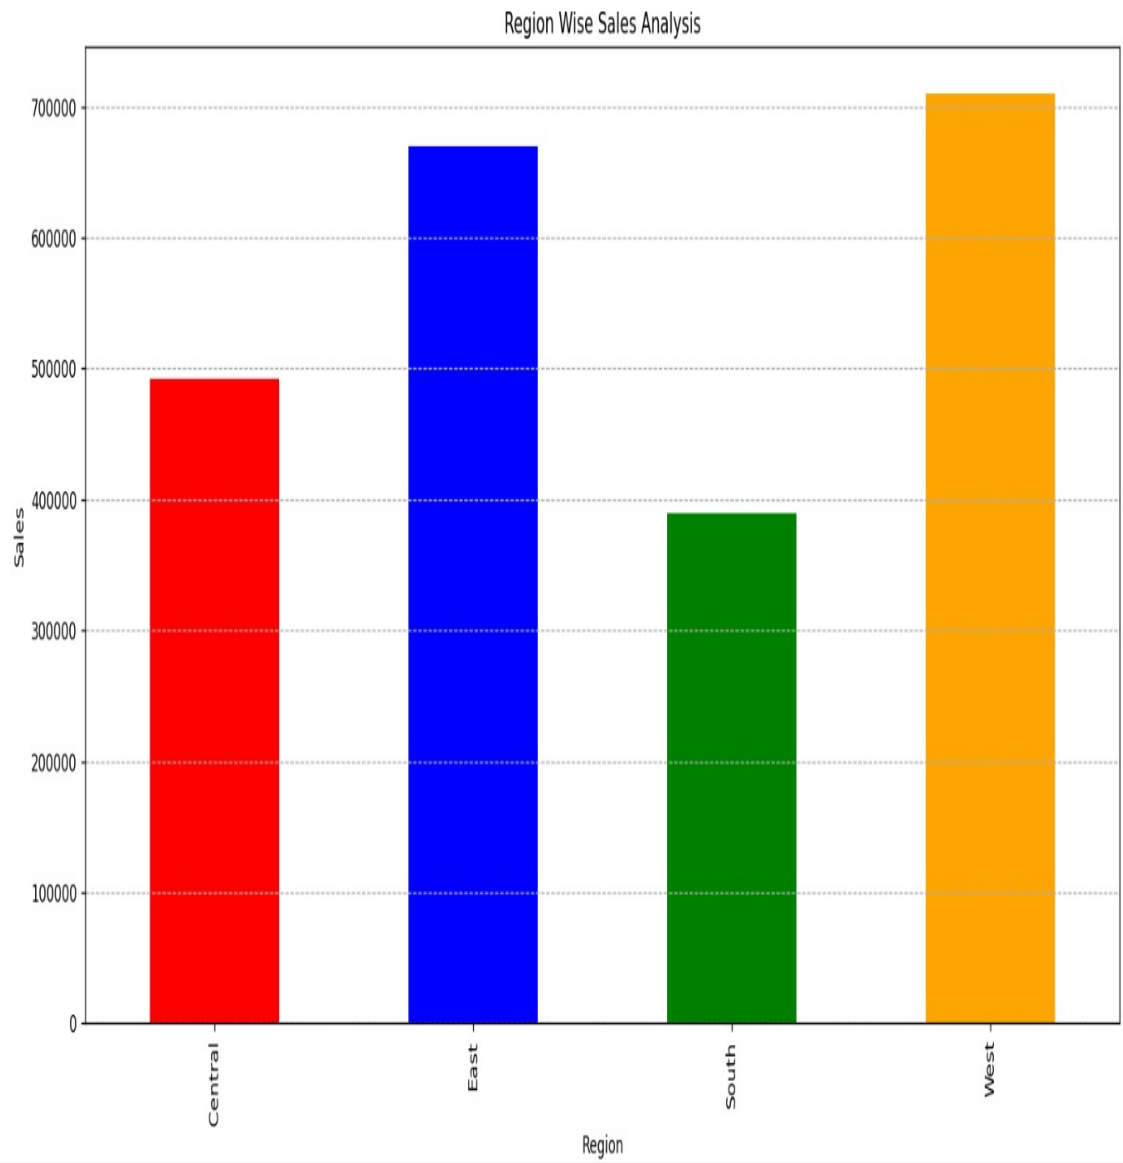

- Total sales revenue is 2,261,536.78
- West region performed best among all regions
- Technology category is the highest revenue generator
- Canon imageCLASS 2200 is the top-selling product

Recommendations

- Increase marketing focus on the West region
- Maintain stock for high-demand products
- Invest more in Technology category products
- Improve strategies in lower-performing regions like South

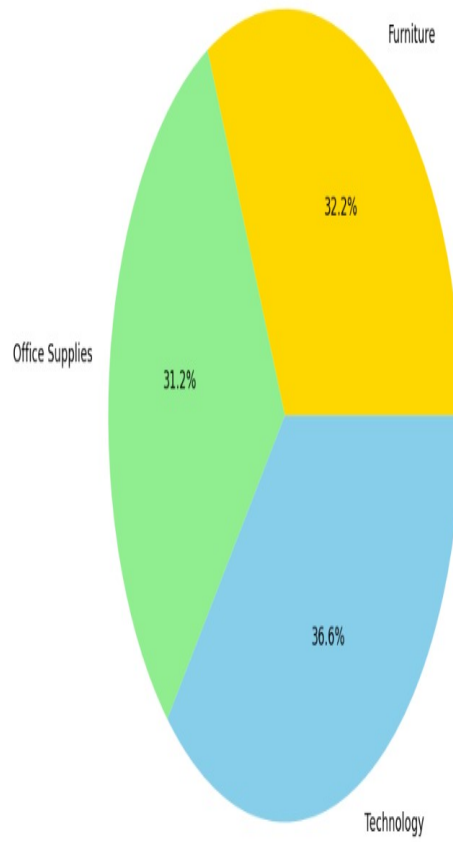

Visualizations

1. Region-wise Sales Chart

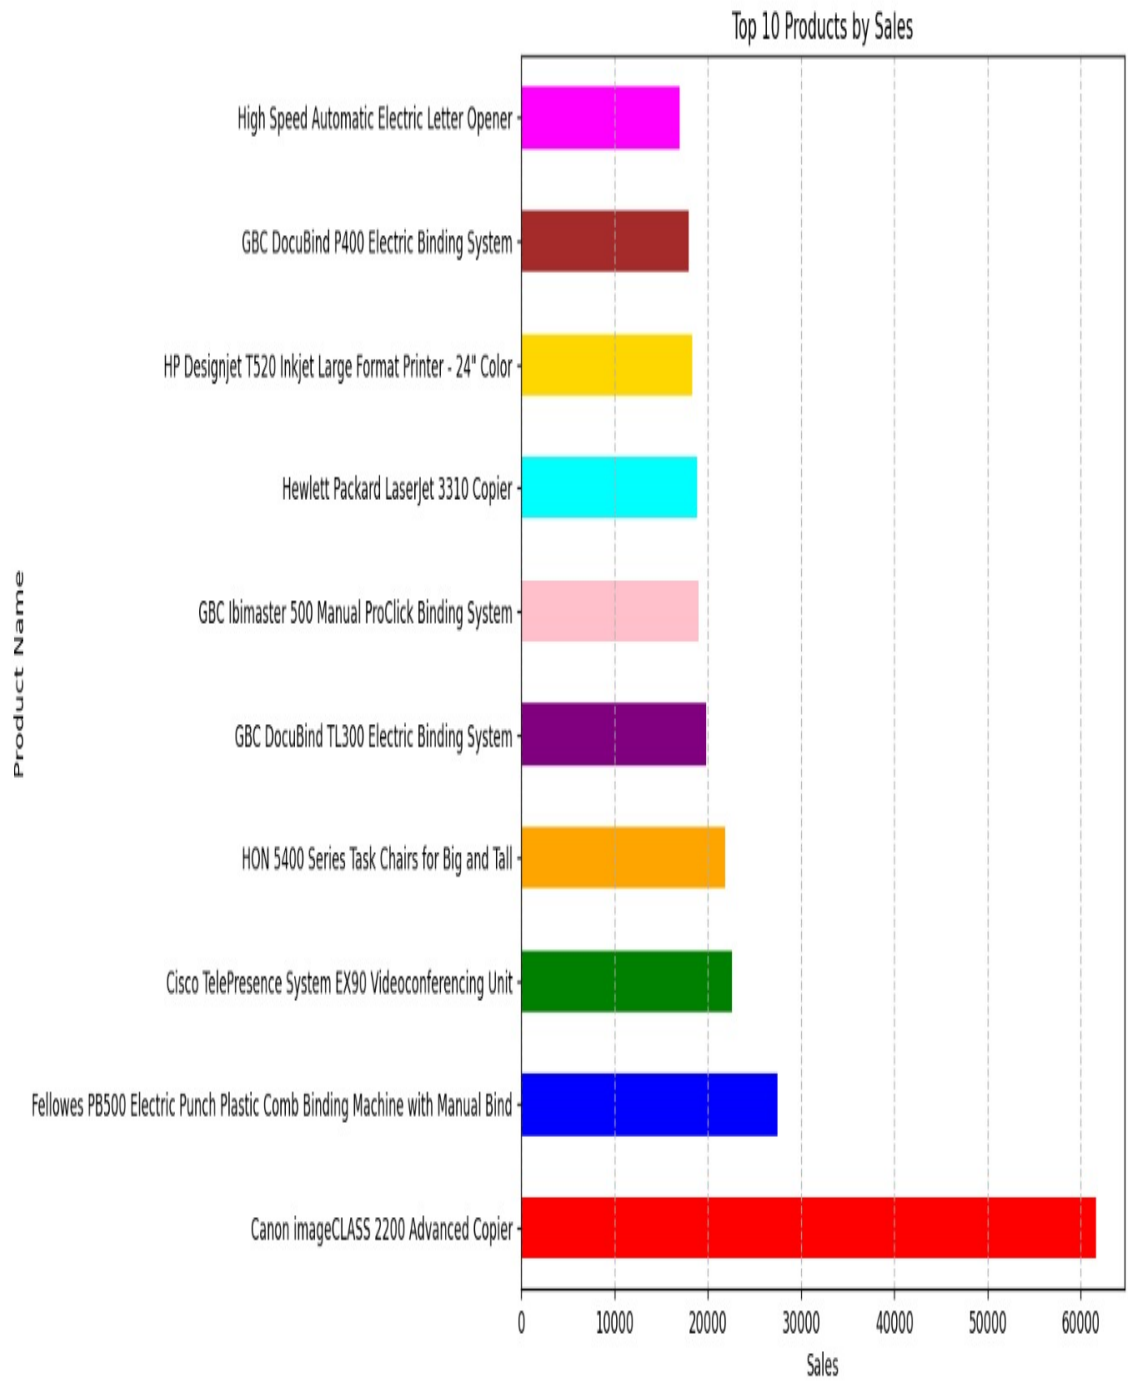

2. Category-wise Pie Chart

Category Wise Sales Distribution

3. Top 10 Products Bar Chart

Conclusion

This analysis provides useful insights into business performance. These insights can help in improving sales strategies, optimizing inventory, and increasing overall revenue.
